

MEXICO CITY, MEXICO 1/1/14: Nueva Generacion Manufacturas S.A. De C.V.(NG), a leader in the production of AC motor run and motor start capacitors, has entered into a joint venture agreement with Circutor, S.A.. Circutor is a leader in power factor correction systems and capacitors as well as DC film power electronic capacitors.

The joint venture will bring Circutor's technology to the North and South American markets by utilizing NG's manufacturing facilities and easy logistics to manufacture a complete offering of low and medium voltage power factor capacitors and systems (PFC) and DC film power electronics capacitors in Mexico City, Mexico. Circutor has been manufacturing PFC since the early 1960's and has been a market technology leader in Europe. In fact, Circutor introduced the first nitrogen filled low voltage capacitors to the market. NG is excited to bring Circutor's technology to the Americas

"This joint venture will allow NG to expand its current product offering of PFC capacitors to have a complete catalog for low and medium voltage PFC and enter the growing market of DC film power electronic capacitors. NG will be able to use Circutor's technology, manufacturing experience and R&D and leverage NGs manufacturing and market expertise to bring success to the joint venture" – Enrique Sanchez, Jr., CEO, NG
