Re: Procurement of metals from mines in Conflict Regions.

Dear Customer;

Several metals are commonly used in the electronics industry such as: gold (Au), tantalum (Ta), tungsten (W) and Tin (Sn) that can be extracted from many regions, including what has been termed as the "Conflict Region".

Most recently, the eastern region of the Democratic Republic of Congo (DRC) has been determined to be a "Conflict Region".

Nueva Generacion Manufacturas S.A DE C.V has collected information from our suppliers regarding to the origin of the minerals they use in our raw materials.

Therefore, we can assure you that raw material used in our capacitors are in compliance with Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act imposes requirements on manufacturers if their products containing "Conflict Minerals" (tin, tantalum, tungsten, gold, etc.) originating from the Democratic Republic of the Congo (DRC) or an adjoining country (Angola, Burundi, Central African Rep., Rep. of Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia). This legislation requires all manufacturing companies who publicly trade with the U.S. to report annually to the Securities and Exchange Commission (SEC) whether they use Conflict Materials that originated from the Democratic Republic of Congo (DRC) or an adjoining country. Companies are required to conduct with due diligence inquiries in their supply chains. This process will need supplier cooperation to determine whether products contain conflict minerals from the DRC or an adjoining country. It is our intention to do what we can to ensure that the products and components in our supply chain do not contain minerals from those geographic areas which contribute to the armed conflicts in the DRC and adjoining areas.

Nueva Generacion Manufacturas S.A DE C.V expects all of its suppliers to comply with the requirements listed above and provide all necessary declarations.
